THE PLANETS

CHRONICLE BOOKS

523.4
N273

EXPLORE the wonders of our solar system in this magnificent visual tour of the planets and celestial bodies orbiting the Sun. More than 200 photographs from the archives of NASA are paired with captions detailing the science behind some of our solar system's most extraordinary phenomena. Images of the newly explored areas of Jupiter, the fiery volcanoes on Venus, the methane lakes on Saturn's moon Titan, and much more reveal the astronomical marvels of our cosmic neighborhood. Anyone with an interest in science, astronomy, and the mysteries of space will delight in this awe-inspiring guide to our solar system.
